

# SANG HYUN PARK

park2451@umn.edu | sanghyunpark-1.github.io | Google Scholar | LinkedIn

## EDUCATION

---

**University of Minnesota (Minneapolis, MN, USA)**  
PhD, Electrical Engineering (GPA: 3.95)

Sep 2020 -

Advisor: Tony Low  
Thesis: Engineering two-dimensional plasmons via quantum interactions

**University of Oxford (Oxford, UK)**  
MPhys (Integrated Bachelor's/Master's degree), Physics, *first class honours*

Oct 2013 - July 2017

Advisor: Ian Walmsley, Benjamin Brecht  
Thesis: Complex temporal shaping and characterization of laser pulses for quantum memories

## PUBLICATIONS

## RESEARCH EXPERIENCE

---

**University of Minnesota (Minneapolis, MN, USA)** Sep 2020 - (May 2025, expected)  
*Research Assistant*

- Working on engineering plasmonic properties of two-dimensional materials using quantum interactions
- Calculated optical properties of two-dimensional materials using in-house Python/MATLAB code
- Performed electromagnetic simulations of patterned two-dimensional materials using COMSOL
- Led multiple projects resulting in 3 first-authored publications (ACS Photonics, Nature Communications, Physical Review B)
- Collaboration with experimental groups leading to 1 second-authored publication (Nature Communications) and 1 co-authored publication (Nature)

**Center for Integrated Nanostructure Physics (Suwon, South Korea)** Aug 2017 - Aug 2020  
*Researcher, Full time*

- Performed simulations on scattering properties of non-Hermitian metasurfaces using CST Microwave Studio
- Experimental verification of simulations using nano-fabrication techniques and terahertz spectroscopy
- Led project on non-Hermitian metasurfaces resulting in 2 first-authored publications (Nanophotonics, Light:Science & Applications)
- Operator for the scanning electron microscope and transmission electron microscope
- Mandatory military service as research agent (3 years)

## INDUSTRY EXPERIENCE

---

**Seagate Technology (Bloomington, MN, USA)** May 2023 - Aug 2023, June 2022 - Sep 2022  
*Summer intern*

- Developed a generative model to achieve freeform optimization of the plasmonic near field transducer
- Generated datasets by running COMSOL simulations on HPC systems
- Trained conditional GANs and VAEs using simulation data from COMSOL
- Extensive use of PyTorch, COMSOL, and Linux cluster computing systems with GPUs

## ACADEMIC SERVICES

---

- **Reviewer** for Light: Science & Applications, Advanced Functional Materials, Journal of Applied Physics, Scientific Reports

## SKILLS

---

### Programming Languages

- Python, MATLAB: Numerical calculation of electromagnetic material properties. Data visualization.

### Software & Tools

- COMSOL: Simulation of electromagnetic properties of graphene and other two-dimensional materials
- CST Microwave Studio: Simulation of metasurfaces comprised of split ring resonators
- Tensorflow, PyTorch: Training of deep neural networks
- L<sup>A</sup>T<sub>E</sub>X: Writing of manuscripts and notes
